

VENKATA KRISHNA TEJA

Backend / Data-Intensive Systems Engineer — Python · AWS · Event Streaming · ML Serving

tejakrishnatata@gmail.com · +91 8142438278 · linkedin.com/in/venkata-krishna-teja · github.com/KRISHNATEJATATA · portfolio-myteam-6d4d.vercel.app

SUMMARY

Backend engineer building event-driven data platforms in Python on AWS. Currently building the recommendation platform for Avid Content Core at Encora Digital (a Coforge company): Kafka/Kinesis ingestion pipelines, Snowflake-backed analytics, and low-latency serving APIs over Valkey and PostgreSQL. AWS-certified Solutions Architect Associate, Developer Associate, and Cloud Practitioner.

EXPERIENCE

Software Consultant — Encora Digital (a Coforge company)

Aug 2025 – Present

Client: Avid (avid.com) · Project: ACC

- Built core services of the recommendation engine for **Avid Content Core** — an event-driven personalization platform processing user interaction events across multiple domains.
- Built event ingestion services bridging **Kafka (AWS MSK, IAM auth, CloudEvents v1.0)** and consuming 4 Kinesis domain streams with 18 JSON-Schema-validated event types; DynamoDB checkpointing and dead-letter queues provide reliable at-least-once delivery.
- Developed batch computation services producing personalized recommendations (trending, baseline, hybrid scoring) with **LightGBM and scikit-learn**, writing results to Snowflake, PostgreSQL, and a Valkey serving cache.
- Built the **FastAPI read path** serving recommendations to the product UI: cache-aside over Valkey/PostgreSQL, per-service circuit breakers, retries with exponential backoff + jitter, RFC 9457 problem-details errors.
- Operate to production standards: OpenTelemetry tracing, Prometheus metrics, Docker + Tilt environments, testcontainers integration tests gated at 80% coverage, ruff/bandit linting.

PERSONAL PROJECTS

- Scalable E-Commerce Backend** — Python, MIT — microservice-ready architecture: async processing, caching, messaging, auth, observability · [github.com/KRISHNATEJATATA/scalable-ecommerce-backend](#)
- Kafka Event Pipeline** — Python, MIT — schema validation, automatic retries, DLQ handling, real-time Prometheus metrics · [github.com/KRISHNATEJATATA/kafka-event-pipeline](#)
- AWS ETL Pipeline** — Python — end-to-end pipeline on AWS: raw ingestion → transformation → queryable storage, with scheduling and idempotent failure handling · [github.com/KRISHNATEJATATA/aws_etl](#)

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2024)
- AWS Certified Developer – Associate (July 2026)
- AWS Certified Cloud Practitioner (2023)
- Google Cloud Skill Badge — Prompt Design in Vertex AI (2024)

SKILLS

Languages	Python, SQL
Backend	FastAPI, asyncio, SQLAlchemy (async), Pydantic, REST
Streaming & Data	Apache Kafka / MSK, Amazon Kinesis, SQS, EventBridge, RabbitMQ, Snowflake, DynamoDB, PostgreSQL / Aurora, Valkey / Redis
ML	LightGBM, scikit-learn, pandas
Cloud & DevOps	AWS, Docker, Terraform, GitHub Actions, ArgoCD / GitOps
Observability & Quality	OpenTelemetry, Prometheus, pytest + testcontainers, ruff, bandit

EDUCATION

B.Tech, Computer Science & Engineering — Vellore Institute of Technology, Chennai

2021 – 2025 · 83.5%
